Why have we developed this technology if it wasn't made available to improving our lifestyles? Why should a "select group" mandate what is made available to the public?

I have been a subscriber to XM for the past (6) months. My experience has been great. I assure you there is no turning back, within the next (10) years most will subscribe to satellite radio service.

I have become a spokesperson for satellite radio.

Please consider and reject NAB Petition 04-160. Allow the continued growth of this technology and service.
